

Luis Meza

Full-Stack Web Developer

Lima, Peru · luismeza.com · +51 924 188 553 · ednilsonluis.11@gmail.com · github.com/luismeza

PROFESSIONAL SUMMARY

Full-stack developer with over a year of hands-on experience building web applications from end to end. On the frontend, I work with modern frameworks to deliver clear, performant, and user-focused interfaces. On the backend, I design and maintain business logic on top of relational databases and complex multi-table schemas, ensuring consistency, efficiency, and scalability. Intermediate English (B1/B2). Known for responsibility, punctuality, and a results-driven approach — committed to quality and effective teamwork on every project.

EXPERIENCE

Alticsa

Dec 2025 – Present

Technical support and feature implementation across company-developed systems.

- Maintenance and support for a corporate WordPress website.
- Developed new frontend and backend features for an ERP built with React and NestJS.
- Developed new frontend and backend features for an ERP built with Next.js and FastAPI.

Centro Odontologico Especializado Maxilaris

Jan 2025 – Dec 2025

Developed new processes and provided ongoing support for the company ERP.

- Implemented WebSockets with Socket.IO for real-time communication across clinical modules.
- Built new projects with React and Next.js under a micro-frontend architecture.
- Maintained and supported a legacy Angular system.
- Developed new backend services using NestJS and PostgreSQL.
- Implemented full integration between CRM and ERP systems.

FEATURED PROJECTS

SHOP-CO

E-Commerce Platform

E-commerce platform enabling users to register, buy, and sell products. Includes product management, shared shopping carts, and PayPal payment integration.

- Designed the complete PostgreSQL database architecture with normalization for high performance and scalability.
- Built the full backend in NestJS with PayPal payment gateway integration.
- Dockerized both frontend and backend for fast, reproducible deployments.
- Frontend built with a layered architecture (presentation, business logic, service, utilities) using custom hooks and a centralized Axios client.

Pulse

Real-Time Messaging Platform

Discord-inspired platform for real-time communication via public and private channels, built with WebSockets for low latency.

- Designed a normalized relational database schema using junction tables.
- Implemented real-time chat using WebSockets with Socket.IO.
- Built the frontend with Angular, leveraging Signals for improved reactive performance.

Vansi

AI-Powered English Learning Platform

Web platform for learning and practicing English through a conversational agent with text and voice support. Incorporates RAG (embeddings + Chroma vector search) to adapt content to the student's CEFR level.

- Designed MongoDB persistence layer: collections for users, chats, messages, agent configuration, and student error logging.
- Implemented email/password authentication with password hashing and JWT via httpOnly cookie; frontend login/registration flows with protected routes.
- Built the product core: English agent API (chat with Ollama), CEFR RAG (embeddings + Chroma + system prompt injection), voice support (Whisper/Faster-Whisper + Edge TTS), and chat/preferences logic.

Student Management System

Collaborative Project

System centralizing the administration of students, courses, professors, and grades with role-based permissions, Google authentication, and email notifications.

- Designed the complete database architecture in PostgreSQL.
- Set up all initial backend configuration: DB connection, entities, modules, controllers, services, and Swagger documentation.
- Implemented authentication system (Google + JWT) on both frontend and backend.
- Developed all administrator and teacher role actions: classes, modules, programs, grade rubrics, form-based assessments, and user management.

EDUCATION

Certus Institute – Lima, Peru

2024 – 2027 (ongoing)

Information Systems Architecture

TECHNICAL SKILLS

Frontend	React · Next.js · Angular · Astro · Tailwind CSS
Backend	NestJS · FastAPI · Node.js · WebSockets (Socket.IO)
Databases	PostgreSQL · MySQL · MongoDB · ChromaDB (vector)
AI / ML	Ollama · RAG · Embeddings · Whisper · Edge TTS
DevOps / Tools	Docker · Git · Swagger
Languages	Spanish (native) · English (intermediate – B1/B2)
